

INTRODUCING LILA® LOW INTENSITY LASER ABLATION PAINLESS ABLATION OF PAIN NERVES PRODUCES LONG LASTING PAIN RELIEF

Minimally invasive first in the world non heat producing laser.
Selectively targets pain nerves using biophotonics without
damaging healthy tissues by a process called LILA® or Low Intensity Laser Ablation.

**Surgery and pain medications can be avoided with long lasting
pain relief.** The first patient treated in December 2009 is still back pain free.

Non cancer bone and joint pain including back pain responds to
LILA®. **Narcotics and similar pain medications are no longer
required to manage pain symptoms after treatment.**

Multiple areas and whole body can be treated at the same time
within a few minutes. Get total pain relief in one go!

LILA® is under FDA review and is not FDA approved at this time. Invented by
Dr. Srinj, LILA® is available only at Advanced Interventional Pain Center consistent
with Section 510(g) of the Federal Food, Drug and Cosmetic Act, 21 U.S.C. § 360(g)
(codified at 21 C.F.R. § 807.65(d)) which determines physician's practice of Medicine.
Patients are selected carefully on a case by case basis.
Patients shall bear charges for the treatments.

Individual results will vary. Over 100 patients including 10 police officers
have been treated with excellent results. **Injured workers can expect to
get the maximum benefit with these novel laser treatments.**

**Immediate Resolution Of Pain Symptoms
Immediate Improvement In Function
Long Lasting Pain Relief And Functional Improvement
Works in Synergy With Surgical Treatments
Eradicates Pain From Failed Back Surgeries
No Drugs, No Anesthetics, No Adverse Effects**
